Computer Science and Engineering

DESIGN AND ANALYSIS OF ALGORITHMS

Time: 03 Hours Maximum Marks: 100 Instructions to candidates:

- 1. Answer all questions from Part A. Part A questions should be answered in first three pages of the answer book only.
- 2. Answer FIVE full questions from Part B. In Part B question number 2, 7 and 8 are compulsory. Answer any one full question from 3 and 4 & one full question from 5 and 6

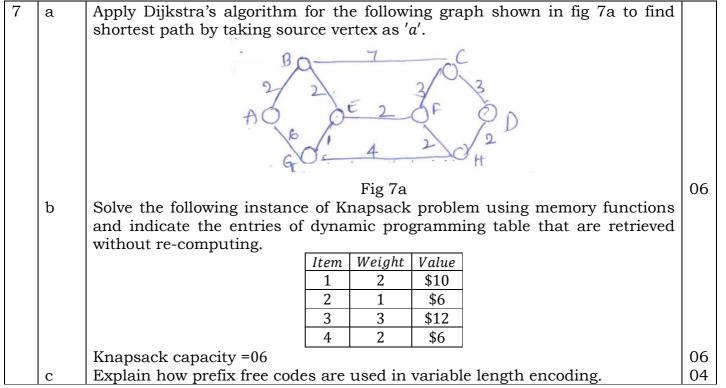

PART A

1	1.1	Prove that $\frac{1}{2} n (n-1) \in \theta(n^2)$.	02
	1.2	Apply Master's theorem to find the efficiency of $T(n) = 16T(\frac{n}{4}) + n$.	01
	1.3	Suppose there are four sorted list of eight elements each; if we merge these lists into a single sorted list of 32 elements. The key comparisons that are needed in worst case using an efficient algorithm are	02
	1.4	The worst case and best case time complexity of insertion sort is	
		and respectively.	01
	1.5	Define spanning tree.	02
	1.6	Compute good suffix table for the following pattern.	
		XYXAXYX	02
	1.7	data structure is suitable for representing sparse graphs.	01
	1.8	In the following directed graph shown in fig 1.8, identify back edge(s) and	
		forward edge(s) if Depth-First-Search (DFS) starts at vertex 1.	
		3	
		Fig 1.8	02
	1.9	Differentiate between feasible solution and optimal solution.	02
	1.10	Compare and contrast dynamic programming and divide-and-conquer	
		algorithm design techniques.	02
	1.11	Construct min-heap using bottom up approach for the following list if elements. 20, 100, 1, 25, 30, 40	02
	1.12	Transformation of problem's instance to an instance of a different problem	
		for which an algorithm is already available is called	01

PART B

2 a Explain asymptotic notations big O, big Omega and big Theta. b Explain general plan of mathematical analysis of non-recursive algorithm. c Illustrate mathematical analysis of recursive algorithm for Tower of Hanoi problem. 3 a Apply merge sort to sort the list M, E, R, G, E, S, O, R, T in alaphabetical order. b Define topological ordering. Apply DFS based algorithm to solve the topological sorting problems for the following graph shown in fig 3b. 6 c Write Johnson-Trotter algorithm for generating all permutations of a given n - element set. 7 OR 4 a Traverse the following graph shown in fig 4a by Breadth-First-Search (BFS) and construct the corresponding Breadth-First-Search forest. Give the order in which vertices visited. Start the traversal at vertex 'a' and resolve ties by the vertex alphabetical order. Fig 4a Write an algorithm for quick sort and discuss the efficiency.				
b Explain general plan of mathematical analysis of non-recursive algorithm. 06 Illustrate mathematical analysis of recursive algorithm for Tower of Hanoi problem. 3 a Apply merge sort to sort the list M, E, R, G, E, S, O, R, T in alaphabetical order. Define topological ordering. Apply DFS based algorithm to solve the topological sorting problems for the following graph shown in fig 3b. Fig 3b Write Johnson-Trotter algorithm for generating all permutations of a given n -element set. OR Traverse the following graph shown in fig 4a by Breadth-First-Search (BFS) and construct the corresponding Breadth-First-Search forest. Give the order in which vertices visited. Start the traversal at vertex 'a' and resolve ties by the vertex alphabetical order. Fig 4a O6	2	а	Explain asymptotic notations big O, big Omega and big Theta.	06
a Apply merge sort to sort the list M,E,R,G,E,S,O,R,T in alaphabetical order. Define topological ordering. Apply DFS based algorithm to solve the topological sorting problems for the following graph shown in fig 3b. Fig 3b Write Johnson-Trotter algorithm for generating all permutations of a given n-element set. OR Traverse the following graph shown in fig 4a by Breadth-First-Search (BFS) and construct the corresponding Breadth-First-Search forest. Give the order in which vertices visited. 5	а	Write an algorithm to compute mode in a given list of numbers using transform and conquer design technique and also give the efficiency of this algorithm.	06
	Ъ	Write an algorithm for computing shift table entries used by Horspool algorithm. Apply Horspool's algorithm to search for the pattern <i>TCCTAT</i> in the text <i>TTACATXYZTXCTATCCTATA</i>	10
		OR	
6	a	Write an algorithm for checking whether an array $H[1n]$ is a heap and determine its efficiency.	07
	b	Construct a 2 – 3 tree for the following list of elements. 7, 6, 5, 4, 3, 2, 1	05
	С	Compare the efficiency of Brute-Force and Horspool string matching algorithm.	04

8	а	Define the following:			
		i) Class P			
		ii) Class NP			
		iii) NP complete.	03		
	b	Using backtracking, obtain solutions to the subset sum problem by taking			
		$S = \{6, 8, 2, 14\}$ and $d = 16$.	06		
	С	Apply branch & bound algorithm to solve the travelling salesman problem			
		for the following graph shown in fig 8c.			
		3 G 5 6 G 7			
		Fig 8c	07
